

**Eyes:**

Eyes are vital sensory organs that allow us to see and interpret the world around us. They detect light, color, shape, and movement, helping with daily activities like reading, walking, and recognizing faces. Healthy eyes are important for balance, coordination, and overall quality of life.

**Mouth:**

The mouth plays a key role in eating, speaking, and breathing. It helps in chewing food, tasting flavors, and starting the process of digestion through saliva. The mouth is also essential for clear speech and facial expressions, making it important for communication and nutrition.
